Diego Coscolla

Tucumán, Argentina | Remote (UTC-3) | diegocoscolla@gmail.com | linkedin.com/in/diego-cos | github.com/dcos96038

Full-Stack Engineer | TypeScript, React/Next.js, Node.js/NestJS, PostgreSQL | Product features end to end, incl. LLM features

SUMMARY

Full-stack software engineer with 4+ years of professional experience in TypeScript, React and Node.js. I make frontend architecture decisions and build product features end to end, from data and backend services to the UI. I've built browser extensions, including one with LLM features, worked on Python data projects, and introduced Spec-Driven Development to my team so AI-assisted work starts from specs and acceptance criteria. Strongest on the frontend; comfortable owning Node.js, NestJS, PostgreSQL and Python services.

EXPERIENCE

Software Engineer – Intermedia IT

Sep 2024 – Present | Argentina | Remote / hybrid

- Made the frontend architecture decisions for an **ERP** product: application structure, a reusable component system, and complex business flows in **React, Next.js, and TypeScript**.
- Built end to end an **analytics platform** for livestock-feeding decisions: data processing, business rules, backend services, and KPI dashboards.
- Design and integrate APIs and backend services with **Node.js, NestJS, PostgreSQL, and Redis** (relational data modelling, persistence, async jobs).
- Co-developed **WTM, a browser extension with LLM features**: captures relevant browsing context, stores it, and lets users query it with language models.
- Researched models for daily development, helped set up an **agent-based engineering workflow**, and taught the team **Spec-Driven Development (SDD)** so specs and acceptance criteria guide AI-assisted implementation.
- **Master Enrichment: Microsoft Fabric** pipelines and notebooks to consolidate and enrich a debtor master database, integrated with **Azure SQL** and SharePoint via Microsoft Graph.
- **BISA:** internal stock transfers and orders module between warehouses. **Python** API (Alembic, pytest), **TypeScript** frontend (Vitest) and async ERP integration with stock reservations and hexagonal design.

Full-Stack Software Engineer – Qualita & freelance contracts

Jan 2022 – Aug 2024 | Argentina

- **Qualita:** built frontend features and API integrations for a private courier's e-commerce platform (purchases, shipping, operations) and for a last-mile delivery mobile app, in React, Next.js, and TypeScript.
- **Freelance:** full-stack features (TypeScript, React, Next.js, Node.js, SQL) for a gamified financial-education mobile app, a live-event platform for viewers and the production team, and a financial-alerts platform built on public US market data.

Frontend Engineer – Nosis (contract)

Jan 2023 – Jul 2023 | Argentina

- Built solo a Chrome extension for lead capture on top of Nosis APIs, still in production; migrated React apps from JavaScript to TypeScript.

React Native Engineer – White Project (contract)

Sep 2022 – Jan 2023 | Argentina

- Helped build from scratch a React Native / Expo app for construction projects: UI, navigation, state, API integration, early architecture.

Earlier: RPA Developer – Practia Global (Sep 2021 – Sep 2022)

Automated OSDE operational processes with Blue Prism.

SKILLS

Languages: TypeScript, JavaScript, Python, SQL, HTML, CSS
Frontend: React, Next.js, React Native, Expo, Tailwind CSS, state management, reusable component systems
Backend & data: Node.js, NestJS, Python, REST APIs, GraphQL, PostgreSQL, Azure SQL, Microsoft Fabric, Redis, workers and job queues
AI in the workflow: LLM features, agent-based workflows, Spec-Driven Development (SDD), AI-assisted development
Tooling & practices: Docker, CI/CD, Git, monorepos (Turborepo, pnpm/Yarn workspaces), modular architecture
Spoken languages: Spanish (native), English (B2+, professional working proficiency)

EDUCATION

Universidad Tecnológica Nacional (UTN) – Information Systems Engineering coursework (3 years completed)
